

Futaba Model Data Converter

Model Data Converter

The Futaba Model Data Converter is designed to allow modelers to quickly and efficiently share data between various Futaba transmitters that utilize either an SD or CF memory card. For example, it is now possible to copy the model data from a T14MZ transmitter and utilize this data on Futaba's T12FG system without having to manually reprogram the 12FG to do so.

Prior to using the Model Data Converter software, please ensure that your transmitter is utilizing the latest update for the respective transmitter. Also, be sure to select the desired conversion data in transmitter after it has been updated.

The Futaba Model Data Converter supports the model data of a transmitter that has been updated to the following versions.

Tx type	Editor Version	Encoder Version					
T14MZ/FX40	Ver.1.3.2 and later	Ver.1.41 and later					
T12Z	Ver.1.3.2 and later	Ver.1.39 and later					
T12FG/FX30	Ver.1.6 and later						

Important: Always check the operation of the model prior to flight.

1. Preparation

1-1. Please make sure that the card reader is attached to the PC prior to inserting the memory card.

1-2. After ensuring that the memory card of the original transmitter contains the model to be converted, place the memory card in the card reader which is attached to your PC.

(Note) When the source code of the conversion and the transmitter model support the same memory card type (i.e., SD or CF), you may utilize the same memory card to save the data.

1-3. Please run the Model Data Converter. To do so, click the Model Data Converter executable.

2. Select the Source of the Data

2-1. Please select the transmitter type from which the data will be transferred. To do so, click on the 'Transmitter' drop-down menu located in the 'Convert from' block.

2-2. Next, click the "..." button of the "Convert from" block.

[Condition Name]

* Please input the new condition name into the text box of the respective editing condition.

* If you click the "Reset" button of the "Condition name" block, and select "Yes" in the confirmation dialog, the condition names are initialized using the name of the conditions from the original data.
* If you click the "Set to default" button of the "Condition name" block, and select "Yes" in the

confirmation dialog, the condition names are initialized in an abbreviated form with only eight (8) characters. For example, "CONDIT1" rather than "Condition 1".

[Dual rate name]

* Every condition allows the editing of the dual rate names. To select the condition to edit, use the drop-down menu in the "Condition" list of the "Dual rate name" block.

* When you select the "Reset" button of the "Dual rate name" block, the dual rate names are reset utilizing the name designations from the original data.

* When you select either the T12FG or FX30 as the intended destination location, you cannot edit the dual rate names.

[Substitute hardware function]

* The Futaba Model Data Converter can substitute hardware if the intended transmitter is not equipped with the same items. For example, if the source code transmitter utilized an "RST" designation, the converted data may be replaced by "RS" if the destination transmitter does not utilize the "RST" designation but uses "RS" instead.

* If the intended transmitter does not utilize the same hardware, the initial value of the hardware is set to NULL.

- * The substitution of switch hardware and the linear hardware is not possible.
 - Switch hardware ···SW-A,SW-B,SW-C,SW-D,SW-E,SW-F,SW-G,SW-H,SS1(SI),SS2(SJ),CD-SW
 - Linear hardware …LD,RD,LS,RS,LST,RST,CD,L1,L2,L3,J1,J2,J3,J4,T1,T1,T3,T4.T5,T6,T7,T8

5. Data conversion

5-1. Click the "Convert" button.

Futaba	Model Data Converter 🛛 🛛 🔀
(į)	The conversion of data was completed.
	OK.

5-3. Depending upon the source and destination transmitter models, a warning dialog *might* appear. Read the information in the dialog box prior to clicking the "OK" button. Additionally, we suggest that you check the operation of the model prior to flight.

Futaba Model Data Converter	
♪	A kind of the hardware and the numbers of the switch position are different by a transmitter. Please check the operation before the flight.
	OK.

6. Precautions and warnings

6-1. General

- T14MZ and FX40 are displayed with "T14MZ/FX40" in the "Transmitter" column on the "Convert from" and "Convert to" blocks.

6-2. When converting data to the T12FG or FX30 from the T14MZ, FX40, or T12Z

- The Box/Hysterisys setting of the hardware is canceled.

- The nested logic switch is set to NULL.
- All logic switches except the "Condition Select" are set to NULL.
- The Linear/VTR/Spline curve is changed to a point curve.
- The combination setting is set to Single unless it is set in all Condition to Group.
- The setting of "Fuel Mixture" and "Multi Engine" are initialized.

6-3. When converting data to the T14MZ, FX40, or T12Z from either the T12FG or FX30

- When the model type selected is a glider, and the motor function is used, the model type is converted to a motor glider.

6-4. When converting data to the FX30 from the FX40

- SS1/SS2 are converted to SI/SJ.

6-5. When converting data to the FX40 from the FX30

- SI/SJ are converted to SS1/SS2.

7. Error Message

Futaba Model Data Converter		
The T12Z data could not store to the location F:¥. Please check the "Transmitter" type and the "Location" in the "Convert to" group.		
Subject	Bad, or incorrect, media type	
Message	The "Transmitter" type data could not store to the location "Drive or folder path".	
	Please check the "Transmitter" type and the "Location" in the "Convert to" group.	
	The SD card can only save model data of the T12FG/FX30 using a special format (FFS	
	format). However, the Model data of the T14MZ/FX40/T12Z was going to be created	
Explanation	to an SD card formatted with the FFS. Alternatively, this might indicate that the	
	model data of a T12FG/FX30 was going to be created to a location that did not contain	
	an SD card formatted with the FFS.	
	Please set "Transmitter" and "Location" of the "Convert to" block again.	
What to do	If the "Transmitter" is a T12FG/FX30, please set "Location" to the SD card which	
	utilizes the FFS format. If the "Transmitter" is a T14MZ/FX40/T12Z, please set	
	"Location" to any place other than the FFS formatted SD card.
